increasing the survival of neuronal, dopaminergic and GABA-nergic cells by using a ptc therapeutic such as a protein kinase inhibitor, or an agent derived from hedgehog polypeptides, useful in the treatment of parkinson's disease

Sisclosure; Page 95-97; 138pp; English.

This nucleotide sequence comprises a coding region for the human comprises a coding region for the human standard by the findian hedgehog protein (see W97763). The invention is based on the finding that hedgehog proteins are useful as protective agents in the treatment and prophylaxis of neurodegenerative disorders for the general loss of dopaminergic and/or GABA-nergic neurons, or the general loss of tissue from the substantia nigra.

Exemplary disorders include Parkinson's disease, Huntington's disease (both claimed), amyotrophic lateral sclerosis and cerebral ischaemia. The invention relates to hedgehog therapeutics (i.e. hedgehog polypeptides and gene therapy constructs e.g. constructs encoding recombinant hedgehog polypeptides and trans-activation
                                                                                                                                                                                                                                                                                                     Mahanthappa NK, Miao N, WPI; 99-142578/12. A bloactive polypeptide comprising amino acid residues 28-202 of human Ihh is preferred. The products can also be used for the maintenance of differentiated neurons in cultures, and to enhance the implantation of such neuronal cells in an animal. They can also be used to of such neuronal cells in an animal. They can also be used to prevent or treat neurodegenerative conditions arising from the use of certain drugs, and in the prevention and/or treatment of hypoxia, e.g. as a neuroprotective agent.

PS This nuclectide sequence comprises a coding region for the human CC Indian hedgehog protein Thh (see Y05516). The invention relates to CC tissue by ecotopically contacting muscle cells, especially muscle cC tissue by ecotopically contacting muscle cells, especially muscle cC tissue by ecotopically contacting muscle cells, especially muscle cC tissue by effect of hedgehog proteins on patched signalling, or cC constructs) or ptc therapeutic (i.e. a small organic molecule that CC mimics the effect of hedgehog proteins on patched signalling, or cC activates or potentiates patched signalling) in an amount effective CC to alter the growth state of the treated cells. Also claimed is a CC method for treatment or prevention of disorders of, or surgical or CC comsetic repair of, such muscle tissues, by administering a hedgehog polypeptide or ptc therapeutic. The disorder may be muscle atrophy, in particular skeletal muscle atrophy or cardiac CC muscle atrophy, cachexia, or muscular myopathy (all claimed). The hedgehog polypeptide or ptc therapeutic can inhibit growth of mesole tissue such as in myoblastic or cc neoplastic growth of muscle tissue such as in myoblastic sarcoma (also claimed). The hedgehog therapeutic preferably comprises at CC least a bloactive extracellular portion of a hedgehog protein (see CC 905510-19) encoded by a vertebrate hedgehog gene (see X25098-107), CC especially a human hedgehog gene.

Proditions - is used for the treatment and prevention of e.g. cerebral infarction, stroke and transient ischaemic attacks pisclosure; Page 66-68; 104pp; English.

CC A method has been developed for limiting the damage to neuronal cells by ischaemic conditions by administering a ptc (patched) conditions by administering a ptc (patched) concerned to reduce cerebral infarct volume (CIV). Damage to neuronal cells can also be limited by administering a gene activation construct which recombines with the genomic hedgehog gene to provide a heterologous transcription regulator linked to the coding region of this gene. Administration of the ptc therapeutic agent is used to protect cerebral tissues against ischaemic injury; to treat cerebral infarct or ischaemia, stroke (thrombolic or embolic) and transient ischaemic or injury to the brain or spinal cord, oedema caused by trauma, haemorrhage and encephalomyelitis, or in conjunction with (coronary bypass) surgery. Treatment (which may be prophylactic) is used where ischaemic/epoxic conditions may cause cerebral hypoxia, or progressive loss of neurons due to oxygen depletion, including in patients with hypotension. The coronant sequence encodes a hedgehog sequence given in the present coronance conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    멍

CC This nucleotide sequence comprises a coding region for the mouse CC Indian hedgehog protein Ihh (see Y05512). The invention relates to CC a method for modulating the formation and/or maintenance of muscle tissue by ecotopically contacting muscle cells, especially muscle CC stem/progenitor cells, in vitro or in vivo, with a hedgehog CC therapeutic (i.e. hedgehog polypeptides and gene therapy CC constructs) or ptc therapeutic (i.e. a small organic molecule that CC mimics the effect of hedgehog proteins on patched signalling, or CC constructs or potentiates patched signalling in an amount effective to alter the growth state of the treated cells. Also claimed is a CC method for treatment or prevention of disorders of, or surgical or cosmetic repair of, such muscle tissues, by administering a hedgehog polypeptide or ptc therapeutic. The disorder may be cCC muscle atrophy, cachexia, or musculat myopathy (all claimed). The hedgehog polypeptide or ptc therapeutic can inhibit growth of myoblastic growth of muscle tissue to provide treatment of hyperblastic or neoplastic growth of muscle tissue such as in myoblastic sarcoma (also claimed). The hedgehog therapeutic preferably comprises at cleast a bioactive extracellular portion of a hedgehog protein (see Y05510-9) encoded by a vertebrate hedgehog gene (see X25098-107), cespecially a human hedgehog gene.

therapy.

Therapy.

Claim 4; Page 146-47; 210pp; English.

CC The sequence encodes a human Indian hedgehog protein, homologous

CC The sequence encodes a human Indian hedgehog protein (R77337), and has been isolated by

CC to a Drosophila hedgehog protein (R77337), and has been isolated by

CC screening of human genome DNA by nested polymerase chain reaction

CC using primers Q91643, Q91644 and Q91645, followed by use of a clone

CC to screen a human fetal lung 5'-stretch plus CDNA library in phage

CC lambda gt-10. Probes and primers derived from hedgehog sequences

CC may be used as diagnostic agents for neuromuscular, autonomic or

CC central nervous system disorders, and the gene may also be used in

CC gene therapy. Antibodies generated from the encoded protein may be

CC used as therapeutic or research reagents.

Hedgehog-like protein(s) and nucleic acide treat degenerative nervous system discontinuous control of the 
The sequence encodes a mouse Indian hedgehog protein, homologous to a Drosophila hedgehog protein (R77337), and has been isolated by low stringency screening of a mouse genome DNA library and screening of an 8.5 day post coitum cDNA library. The partial cDNA is complete at the 3'-end, as evidenced by the presence of a polyadenylation consensus sequence and short poly-A tail. Probes and primers derived from hedgehog sequences may be used as diagnostic agents for neuromuscular, autonomic or central nervous system disorders, and the gene may also be used in gene therapy. Antibodies generated from the encoded protein may be used as therapeutic or research reagents.

A clone resulting from the amplification (encoding R77348) is used to isolate the full-length cDNA from a stage 22/22 limb bud cDNA library. Primer Q91649 is derived from the chicken cDNA sequence, and is used to screen transgenic mice. Probes and primers derived from the sonic hedgehog sequence may be used as diagnostic agents for neuromuscular, autonomic or central nervous system disorders, and the gene may also be used in gene therapy. Antibodies generated from the encoded protein may be used as therapeutic or research
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI; 95-255060/33.

Proditions - is used for the treatment and prevention of e.g. cerebral infarction, stroke and transient ischaemic attacks proceeding infarction, stroke and transient ischaemic attacks.

PS Disclosure; page 63-64; 104pp; English.

CC A method has been developed for limiting the damage to neuronal cells by cischaemic or epoxic conditions by administering a ptc (patched) construct which recombines with the genomic hedgehog gene to reduce cerebral infarct volume (CIV). Damage to neuronal cells can also be limited by administering a gene activation construct which recombines with the genomic hedgehog gene to provide a heterologous transcription regulator linked to the coding region of this gene. Administration of the ptc therapeutic agent is used to protect cerebral tissues against ischaemic njury; to treat cerebral infarct or ischaemia, stroke (thrombolic or embolic) and transient ischaemic cattacks. It may also be used as a prophylactic in many qther cases of a tacks. It may also be used as a prophylactic in many qther cases of conditions may cause cerebral hypoxia, or progressive loss of neurons conditions may cause cerebral hypoxia, or progressive loss of neurons conduction with hypotension. The treatment reduces CIV by at least 25, particularly at least 70,8. The consent conduction condens a hedgehog sequence given in the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

Increasing the survival of neuronal, dopaminergic and GABA-nergic cells - by using a ptc therapeutic such as a protein kinase rinhibitor, or an agent derived from hedgehog polypeptides, useful in the treatment of parkinson's disease placetosure; page 83-85; 138pp; English.

This nucleotide sequence comprises a coding region for the chicken Sch Sonic hedgehog protein (see W97765). The invention is based on the finding that hedgehog proteins are useful as protective agents comprises of neurodegenerative disorders comprises of neurodegenerative disorders consuling from the loss of dopaminergic and/or GABA-nergic neurons, cor the general loss of tissue from the substantia nigra.

Exemplary disorders include parkinson's disease, Huntington's cliscase (both claimed), amyotrophic lateral sclerosis and cerebral ischaemia. The invention relates to hedgehog therapeutics (i.e. hedgehog polypeptides and gene therapy constructs e.g. constructs
                                                                                                                                                                                                                                                                                                                                                                                                                                        Chicken Sonic hedgehog (Shh) cDNA.

```
occurring hedgehog proteins on patched signalling) that are effective in both human and animal subjects. Human IAh and Dhh polypeptides (see W97063-64) are preferred. The products can also be used for the maintenance of differentiated neurons in cultures, and to enhance the implantation of such neuronal cells in an animal. They can also be used to prevent or treat neurodegenerative conditions arising from the use of certain drugs, and in the prevention and/or treatment of hypoxia, e.g. as a neuroprotective
                                                                                                                                                                                                                                                                                                                                                     constructs for altering hedgehog gene regulatory sequences) and ptc therapeutics (i.e. agents which mimic the effect of natural

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ş
cosmetic repair of, such muscle tissues, by administering a hedgehog polypeptide or ptc therapeutic. The disorder may be muscle atrophy, in particular skeletal muscle atrophy or cariatac muscle atrophy, cachexia, or muscular myopathy (all claimed). The hedgehog polypeptide or ptc therapeutic can inhibit growth of myoblastic-derived tissue to provide treatment of hyperblastic or neoplastic growth of muscle tissue such as in myoblastic sarcoma (also claimed). The hedgehog therapeutic preferably comprises at least a bloactive extracellular portion of a hedgehog protein (see Y05510-19) encoded by a vertebrate hedgehog gene (see X25098-107), especially a human hedgehog gene.

This nucleotide sequence comprises a coding region for the chicken Sonic hedgehog protein shh (see Y05510). The invention relates to a method for modulating the formation and/or maintenance of muscle tissue by ecotopically contacting muscle cells, especially muscle stem/progenitor cells, in vitro or in vivo, with a hedgehog therapeutic (i.e. hedgehog polypeptides and gene therapy constructs) or ptc therapeutic (i.e. a small organic molecule that the constructs of the therapeutic (i.e. a small organic molecule that

                                                                                                                                                                                                                                                                                                                                                                                                                       PT Increasing the survival of neuronal, dopaminergic and GABA-nergic process of the survival of neuronal, dopaminergic and GABA-nergic process. By using a ptc therapeutic such as a protein kinase prinhibitor, or an agent derived from hedgehog polypeptides, useful in process. This nucleotide sequence comprises a coding region for the human CC Dhi Desert hedgehog protein (see W97764). The invention is based on the treatment and prophylaxis of neurodegenerative disorders come the finding that hedgehog protein sare useful as protective agents in the treatment and prophylaxis of neurodegenerative disorders consulting from the loss of dopaminergic and/or GABA-nergic neurons, constituting from the loss of dopaminergic and/or GABA-nergic neurons, constituting from the loss of tissue from the substantia nigra.

CC disease (both claimed), amyotrophic lateral sclerosis and cerebral schemals. The invention relates to hedgehog therapeutics (i.e. hedgehog polypeptides and gene therapy constructs e.g. constructs constructs for altering hedgehog gene regulatory sequences) and constructs of ratering hedgehog gene regulatory sequences) and coccurring hedgehog proteins on patched signalling) that are effective in both human and animal subjects. A bloactive constructs constructs are products can also be used for the maintenance of constructs in an animal. They can also be used to prevent or treat neurodegenerative conditions arising from the use of certain drugs, and in the prevention and/or treatment of hypoxia, confidence of the conditions arising from the use confidence.
                                                                                                                                                                                                                                                       Query Match

CC This nucleotide sequence comprises a coding region for the human CC Desert hedgehog protein Dhh (see Y05517). The invention relates to CC a method for modulating the formation and/or maintenance of muscle CC stem/progenitor cells, in vitro or in vivo, with a hedgehog cC therapeutic (i.e. hedgehog polypeptides and gene therapy CC constructs) or ptc therapeutic (i.e. a small organic molecule that CC mimics the effect of hedgehog polypeptides and gene therapy CC constructs) or ptc therapeutic (i.e. a small organic molecule that CC mimics the effect of hedgehog proteins on patched signalling, or CC constitutes or potentiates patched signalling) in an amount effective to alter the growth state of the treated cells. Also claimed is a CC method for treatment or prevention of disorders of, or surgical or CC consetic repair of, such muscle tissues, by administering a hedgehog polypeptide or ptc therapeutic. The disorder may be CC muscle atrophy, cachexia, or muscular myopathy (all claimed). The compoliastic growth of muscle tissue such as in myoblastic or mephlastic or muscle tissue such as in myoblastic sarcoma (also claimed). The hedgehog therapeutic preferably comprises at CC (ease at a bloactive extracellular portion of a hedgehog protein (see CC 905510-19) encoded by a vertebrate hedgehog gene (see X25098-107), CC especially a human hedgehog gene.

Redgehog-like protein(s) and nucleic acid(s) encoding them - useful to treat degenerative nervous system disorder(s) and in gene therapy.

PT therapy.

PT therapy.

PT claim 2; Page 143-45; 210pp; English.

CC laim 2; Page 143-45; 210pp; English.

CC using primers of human genome DNA by nested polymerase chain reaction using primers 091643, 091644 and 091645, followed by use of a clone to screen a human fetal lung 5'-stretch plus cDNA library in phage to screen a human fetal lung 5'-stretch plus cDNA library in phage clambda-gri0. A clone has been isolated from a phage P1 library by polymerase chain reaction, using primers SHHPC (091655) and SHR (091655) to give clone SHHP1. A 2.5-kb EcoRI CA repeat fragment is amplified using primers SHHPL. A 2.5-kb EcoRI CA repeat fragment is amplified using primers SHHPL. A 2.5-kb EcoRI CA repeat fragment crosses and primers derived from the sonic hedgehog sequence may be used as diagnostic agents for neuromuscular, autonomic or central nervous system disorders, and the gene may also be used in gene therapy. Antibodies generated from the encoded protein may be used as therapeutic or research reagents.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Local Similarity
                                         Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutvyo Osoegawa and haron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo. NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://Dacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         σ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GTGCCCAACTACAACCCCGACATCATCTTCAAGGATGAGGAGAACAGTGGAGCCGACCGC 291

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       control.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            single cDNA from each cluster was chosen for sequencing. In some cases multiple members of the same cluster were sequenced to assess clustering parameters or single clones were sequenced additional times to assess quality
